

MOUNIKA YENNAM

Software Engineer | Front-End Specialist (React)

📞 609-933-0719 | Dallas, Texas | ✉️ mounikagy2911@gmail.com

 |  |  mounikagy.netlify.app

PROFESSIONAL SUMMARY

An enthusiastic Software Engineer with 5+ years of experience building scalable, accessible, and high-performance web applications. Specialized in React, with strong expertise in responsive UI development, API integration, and performance optimization. Experience building AI-enabled applications, including LLM-powered chatbots using API integration and Retrieval-Augmented Generation (RAG) techniques to deliver context-aware user experiences. Proven ability to translate Figma designs into production-ready interfaces and deliver solutions in Agile environments. Actively expanding into full-stack and AI-driven development.

SKILLS

Front-End: HTML5, CSS3, JavaScript, React, Tailwind CSS

Back-End: Node.js, Express, MongoDB, REST APIs

State & Data: Context API, useReducer, TanStack Query, useMemo

Build & Dev Tools: Webpack, Vite, Git, GitHub, NPM

Cloud & Deployment: Netlify, Firebase, AWS

Methodologies: Agile/Scrum, CI/CD

WORK EXPERIENCE

Client: Molina Health Care — Software Engineer

June 2024 – Present

-
- Developed high-performance, scalable user interfaces using **HTML5, CSS3, Tailwind CSS, JavaScript, React**, ensuring type safety in large codebases.
 - Designed modular React architecture following clean code principles for readability, **testability**, and long-term scalability.
 - Built and maintained **RESTful APIs** using **Node.js** and **Express**, enabling secure and efficient front-end/back-end communication.
 - Implemented client-side routing with **React Router** to enable seamless navigation across multi-step workflows.
 - Centralized complex application state using React **Context API** and **useReducer** for predictable state transitions and better scalability.
 - Integrated **TanStack Query** for efficient server-state management with caching, pagination, and background re-fetching to enhance responsiveness.
 - Built reusable **React components** and **hooks**, reducing development effort and duplicate code by **40%**.
 - Optimized application performance through **lazy loading** and **code splitting**, reducing initial load time.
 - Worked in **Agile/Scrum teams**, contributing to sprint planning, standups, and code reviews to deliver features on schedule.

- Supported CI/CD pipelines using **GitHub Actions** to automate builds, testing, and deployments.

Unikwan — Software Engineer

2019 – 2021

- Developed responsive UI components using HTML5, CSS3, JavaScript, and React based on client requirements.
- Improved page load times by **30%** by modularizing layouts and implementing reusable components using PHP includes.
- Took ownership of legacy PHP projects during resource gaps, independently developing and maintaining reusable components to ensure uninterrupted delivery.
- Built and integrated a React-based chatbot, reducing manual customer support workload by **40%**.
- Deployed and maintained production builds using **FileZilla (FTP)** during developer absence, ensuring timely releases and system stability.

Stripe Digital — Front-End Developer

2017 – 2018

- Developed responsive websites using **HTML, CSS, JavaScript, and Bootstrap**.
- Created reusable PHP components to improve development efficiency.
- Used **Git and GitHub** for version control, collaboration, and repository management.

Tech Mahindra — Data Analyst

2015 – 2016

Client: Chevron

- Worked with **SAP Ariba**, resolving procurement data issues and system inconsistencies.
- Assisted users with data updates and issue resolution impacting business decisions.
- Communicated with stakeholders via calls to resolve critical issues.

AI-Powered Chatbot (LLM + RAG Integration)

- Developed an AI-powered chatbot by integrating LLM APIs via Groq, enabling real-time, context-aware responses
- Implemented **Retrieval-Augmented Generation (RAG)** by incorporating external knowledge sources to improve response accuracy and relevance
- Applied **prompt engineering techniques** to control tone, clarity, and conversational flow
- Utilized **vector-based retrieval concepts** to match user queries with semantically relevant data
- Managed API calls, token usage, and response optimization to balance performance and cost efficiency
